## INGREDIENTS:

Grain Products, Plant Protein Products, Processed Grain By-Products, Lignin Molasses Products, Calcium Carbonate, Salt, Mono-Dicalcium Phosphate, Ferrous Carbonate, Magnesium Oxide, Zinc Oxide, Choline Chloride, Manganous Oxide, Sodium Selenite, Mineral Oil, Sodium Sulfate, Niacin Supplement, Copper Sulfate, Vitamin E Supplement, Vitamin B12 Supplement, Vitamin A Supplement, Menadione Sodium Bisulfate Complex, Riboflavin Supplement, D-Calcium Pantothenate, Cobalt Carbonate, Vitamin D3 Supplement, Ethylenediamine Dihydriodide, L-Lysine, Biotin, and DL-Methionine.

## FEEDING INSTRUCTIONS:

**Gestating Sows:** Feed 4 lbs. per day for at least 2 days after mating. From day 2 to 30, the feeding level should be adjusted to match the body condition of the sow. The goal is to have the sow at the body condition desired for farrowing by 30 days of gestation. Day 30 to 75 feed a constant level of about 6 lbs. or a level sufficient to meet energy requirements and maintain body condition. During day 75 to 100, avoid excess feeding. The result could lower milk production during lactation. From day 100 to 112, increase feed by 2 to 4 lbs. to prevent sows from losing weight during the period of rapid fetal growth. From day 112 to 114, feed 4 lbs. a day.

**Lactating sow:** During lactation, sows should be full-fed 9 to 15 lbs. to obtain maximum milk production. If sows are constipated, ingredients such as beet pulp, oats, wheat bran, or Epsom Salts (1 to 2 tablespoons per feeding) may be added as a laxative.

**Boars:** Boars under heavy use should be fed about 6 lbs. per head per day. Care should be taken to avoid underfeeding when limiting feeding boars.
